Summary

Computer Science Engineering student with a strong interest in software development and web technologies. Skilled in Python, HTML, CSS, and JavaScript, with practical experience gained through internships and academic projects. Experienced in developing web applications and automation solutions, with a commitment to continuous learning and problem-solving. Seeking opportunities to apply technical skills and contribute to innovative software projects.

Education

B.Tech in Computer Science May 2027
Jain Deemed University
Overall GPA: 8.7
Relevant Coursework: Front-End and Backend Development (Software Development).

Technical Skills

- **Programming Language:** Python
- **Web Technologies:** HTML, CSS, JavaScript
- **Knowledge Of:** APIs, Git, GitHub, Docker

Experience

Infocon International Jun–Aug 2025 *Automation and Scripting Intern — Bengaluru, Karnataka, India*

- Automated developer environment configuration using Python, reducing setup time by 75
- Designed data ingestion and parsing utilities for diverse file formats.
- Improved reliability through modular code design and documentation.

RD Infotechnology Jan–Feb 2025 *Frontend Development Intern — India*

- Built responsive web pages using HTML, CSS, and JavaScript.
- Developed Tribute Page, Landing Page, Portfolio Website, and Calculator.
- Used Git for version control and collaborative development.

Relevant Projects

AI-Powered Legal Documentation Assistant 2025 – 2026
Tech Stack: Python, Flask, NLP, OpenAI API

- Developed an AI-powered assistant to draft and summarize legal documents.
- Integrated Flask backend with LLM APIs for automated legal text generation.
- Implemented clause suggestion and risk identification features.

AI Career Guidance Platform (Group Project) 2025
Tech Stack: HTML, CSS, JavaScript, Python, Flask

- Developed a platform helping students explore career paths and skill requirements.
- Built responsive UI using HTML, CSS, and JavaScript.

- Implemented backend processing using Python and Flask.
- Used Git and GitHub for collaborative development.
- **App:** Hyperlink Application
- **Repository:** GitHub Source Code

Face Emotion Detection Algorithm

2026

Tech Stack: Python, OpenCV, CNN, Flask

- Developed a real-time facial emotion detection system using computer vision and deep learning.
- Implemented face detection using OpenCV and emotion classification using a Convolutional Neural Network (CNN).
- Detects emotions such as happy, sad, angry, and neutral using live webcam input.
- Deployed the application online for real-time testing and demonstration.
- **Application:** Hyperlink Application
- **Repository:** GitHub Source Code

MediCare Hospital Management System

2026

Tech Stack: Python, Flask, MongoDB, Docker, HTML, CSS, JavaScript

- Developed a Hospital Management System to manage doctors, patients, appointments, and billing operations.
- Implemented patient registration and appointment booking functionalities through an interactive web interface.
- Utilized MongoDB for storing and managing hospital records and operational data.
- Containerized the application using Docker for simplified deployment and environment consistency.
- Designed a responsive dashboard to provide real-time insights into hospital operations.

Achievements

- Completed two internships in Web Development and Automation.
- Completed certified programs from IIT Kanpur and IBM.
- Participated in hackathons and technical events.
